7. Unsupported Features List (Explicit Boundaries)

To ensure portfolio claims are 100% honest and accurate, the following capabilities are **explicitly NOT implemented**:

1. **Binary File Uploads / Storage:** InternTrack is an external URL metadata registry. It does not parse, store, or stream raw PDF, DOCX, or image binary blobs.
2. **Third-Party Email / SMTP Integration:** Password recovery and deadline notifications do not send outbound SMTP emails or SMS texts.
3. **Automated Web Scraping:** There is no background headless scraper scraping LinkedIn or Indeed directly into the catalog.
4. **Distributed Redis Caching:** Rate limit tokens and refresh tokens are stored in in-memory Bucket4j buckets and MySQL respectively, optimized for single-node deployment.
5. **Universal WCAG 2.1 AA Certification:** Automated tests and Lighthouse achieve 100/100 on automated rules; full AA conformance requires manual screen-reader evaluation.

8. Discrepancy Log & Reconciliation Record

Historical Document Claim	Actual Ground Truth	Reason for Discrepancy & Resolution
Early report: "490 backend tests"	**508 backend tests pass**	Expanded test suite including SpaRouting and RefreshTokenFamilyRevocation suites.
Early report: "DEF-SEC-01 limitation"	**DEF-SEC-01 completely remediated**	Fixed via `@Transactional(noRollbackFor = InvalidTokenException.class)` and `saveAllAndFlush`.
Early report: "4/13 Playwright passed"	**13/13 Playwright passed**	Resolved harness defect by sharing session in serial suites rather than consuming 4 IP rate limit tokens.
Early report: "23/24 Live API passed"	**41/41 Functional + 3/3 Gates passed**	Added required `X-InternTrack-Client: web` anti-CSRF header and expanded tenant isolation checks.
General claim: "Zero-latency database"	**Local benchmark observations**	Explicitly qualified that $<5\text{ms}$ skill matching and $<120\text{ms}$ KPIs are local observations, not production guarantees.
User Manual / Audit: "Password 12+ chars"	**Minimum 8 characters (max 100)**	Reconciled with backend `@Size(min=8, max=100)` and frontend validation `password.length < 8`.
Audit reports: "50 skills / 5 categories"	**58 skills across 6 categories**	Reconciled with `data.sql` (58 rows) and `SkillCategory` enum (`LANGUAGE`, `FRAMEWORK`, `DATABASE`, `TOOL`, `CLOUD`, `METHODOLOGY`).
Some reports: "Proficiency scale 1-5"	**4-tier semantic scale**	Reconciled with `ProficiencyLevel` enum: `BEGINNER`, `INTERMEDIATE`, `ADVANCED`, `EXPERT`.
Audit reports: "Strict HTTPS-only validation"	**HTTP and HTTPS permitted**	Reconciled with `CreateDocumentRequest` regex `^https?://.+` and `DocumentService.isValidHttpUrl()`.
Early User Manual: "8 main sections"	**9 primary navigation sections**	Reconciled with `Sidebar.jsx` (Dashboard, Applications, Opportunities, Interviews, Reminders, Skill Matrix, Documents, Analytics, Settings).
Early Audit: "4 PDFs totaling 55 pages"	**5 PDFs totaling 66 pages**	Reconciled with authoritative PDF build in `docs/pdf/` including Master Audit Final Report.
